

Substance Abuse in Nevada: A Data Book for Prevention Planning in Churchill County

A Project of the Nevada Statewide Coalition
Partnership and Coop Consulting, Inc., 2007

Churchill Community Coalition

ACKNOWLEDGEMENTS AND ATTRIBUTIONS

This publication is a product of the “Nevada Data Project”. This and the other publications of the project were produced by the Nevada Statewide Coalition Partnership, a partnership of Nevada’s substance abuse prevention coalitions, and Join Together Northern Nevada (JTNN), with JTNN serving as the project coordinator and fiscal agent. Coop Consulting, Inc., a private research and evaluation firm, was contracted by JTNN to lead the project design and implementation. An ad hoc Data and Evaluation Committee was formed to guide all aspects of the Data Project. The committee assisted Coop Consulting in the development of instruments, conceptual frameworks, benchmarks, survey management, and related tasks necessary to complete the project. Kevin Quint (Executive Director), Linda Lang, and Brandi Duncan of JTNN coordinated the statewide data collection effort of the coalitions. The members of the committee include:

Doreen Branch, Pacific Institute for Research and Evaluation

Cheryl Bricker, Partnership of Community Resources, Douglas County

Stevie Burden, Substance Abuse Prevention and Treatment Agency

Nancy Corn, Partnership Allied for Community Excellence, Elko

Vidya Kailash, Substance Abuse Prevention and Treatment Agency

Linda Lang, Nevada Statewide Coalition Partnership

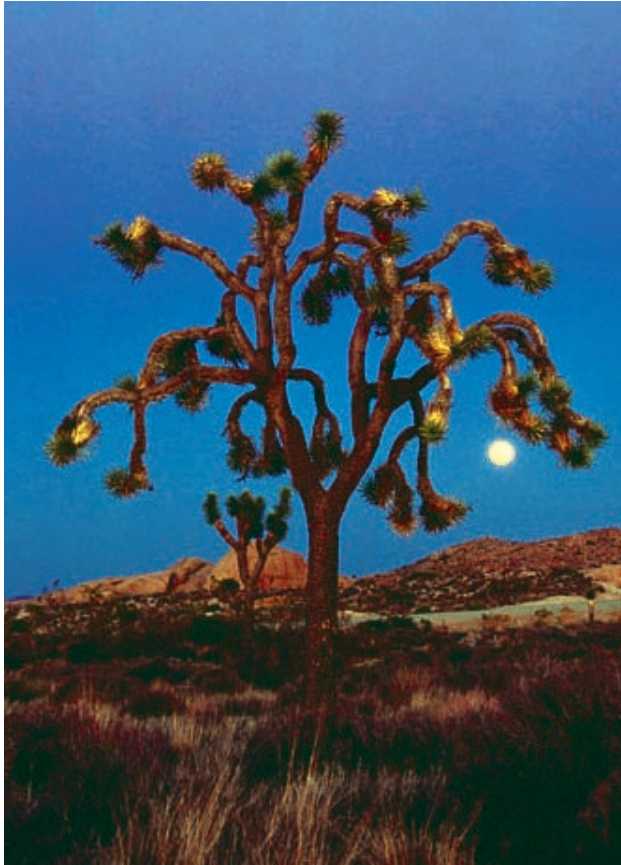

Christy McGill, Healthy Communities Coalition of Lyon and Storey Counties

Kevin Quint, Join Together Northern Nevada, Reno

Stacy Smith, Nye Community Coalition

Belinda Thompson, Goshen Community Development Coalition, Las Vegas

Tonya Wolf, Substance Abuse Prevention and Treatment Agency

ACKNOWLEDGEMENTS (continued)

The archival and treatment data included in these publications was updated and compiled by Vidya Kailash of the Substance Abuse Prevention and Treatment Agency.

This publication was supported by the Nevada Department of Health and Human Services, Mental Health and Developmental Services Division, Substance Abuse Prevention and Treatment Agency through the Federal State Incentive Grant Cooperative Agreement (CFDA #93.243) from the the U.S. Department of Health and Human Services, Substance Abuse and Mental Health Services Administration's Center for Substance Abuse Prevention. Its contents are solely the responsibility of the authors and do not necessarily represent the official views of the U.S. Department of Health and Human Services nor the State of Nevada.

INTRODUCTION

This is a publication of the “Nevada Data Project”. The project was implemented by the Nevada Statewide Coalition Partnership with funding from the Nevada State Incentive Grant (SIG), a Cooperative Agreement grant from the Center for Substance Abuse Prevention (CSAP), a division of the Substance Abuse and Mental Health Services Administration (SAMHSA). The funding is administered by Nevada’s Substance Abuse Prevention and Treatment Agency (SAPTA), an agency of the Nevada Mental Health and Developmental Services Division. Join Together Northern Nevada (JTNN), a substance abuse prevention coalition located in Reno and serving Washoe County, served as the coordinator and fiscal agent for the project. JTNN contracted with Coop Consulting, Inc., a research and evaluation firm, to lead the design and implementation of the project. An ad hoc Data and Evaluation Committee, made up of members of the Partnership and state staff from SAPTA, provided guidance in all aspects of the project.

The goal of the project was to collect comprehensive data for more effective prevention planning by Nevada’s communities. To accomplish this goal, two primary data collection strategies were devised. One strategy was designed to obtain statistically reliable data about community and state-level substance abuse and related problems – a statewide random telephone survey with a sample sufficiently large enough to represent each of the state’s coalitions was initiated to gather these data (384 was the targeted number of completed interviews from each geographic region). The second strategy was designed to obtain data from multiple sectors of the community that can serve as a local baseline measure of perceptions and norms about the severity of high risk and underage drinking and their consequences, and which can provide specific local information that can be used to target specific interventions – a local convenience survey was developed and implemented by the state’s coalitions, collected from community sectors chosen by the coalitions (to obtain a sufficiently large enough sample in each area, each coalition agreed to collect 350 completed surveys). In both survey processes, the coalition target numbers were exceeded in most cases.

Archival data about key indicators are also important to community level planning. Large amounts of data are collected and compiled by state agencies that can be very useful. Data that have been published previously as part of Nevada’s 2005 substance abuse Needs Assessment have been updated where possible and included in this project so as to provide the most comprehensive picture of the available data possible. Data include substance use indicators, along with data on some of the major consequences of use, and data reflecting common risk and protective factors associated with substance abuse behaviors. Treatment admission data may also prove useful for planning and are included in the state level report.

INTRODUCTION (CONTINUED)

TELEPHONE SURVEY

The statewide telephone survey was designed to solicit information about a range of substance abuse behaviors, beliefs and opinions, risks, and related resiliency items. The items in the survey were, to the extent possible, chosen from existing, validated, national surveys.

As the resulting survey instrument and implementation protocol are similar to those required for the nationally implemented Behavior Risk Factor Surveillance Survey (BRFSS), a Request for Proposal solicited bids from national survey firms with demonstrated experience implementing the BRFSS and similar rigorous survey protocols. JTNN selected and contracted with the Burlington, Vermont office of Macro International Inc. (Macro) to perform the survey's data collection. The statewide telephone survey

was implemented from April through July of 2007. Data collection was conducted via telephone surveys with randomly selected adults in randomly selected, telephone-equipped Nevada households.

The telephone survey sample of numbers was drawn from the total non-institutionalized Nevadan adult population (ages 18 and older) residing in telephone-equipped dwellings. This population excluded adults: (1) in penal, mental, or other institutions; (2) living in other group quarters such as dormitories, barracks, convents, or boarding houses; (3) contacted at their second home during a stay of less than 30 days; (4) living in a home without a telephone; and (5) who do not speak English well enough to be interviewed, except for Spanish-speaking respondents, who were then interviewed by Spanish-speaking interviewers. The resulting sample provided for a proportional-to-adult population, stratified, statewide random sample of telephone-equipped Nevada households. At the conclusion of the survey period, 4,678 telephone interviews were completed.

The survey's sample design specified a list-assisted, random digit dial (RDD) sample of Nevada's telephone-equipped households. The list-assisted RDD procedure assures that households with telephone numbers assigned since the publication of current directories, as well as those with deliberately unlisted numbers, are sampled in their correct proportions. List-assisted state RDD samples are generated by first preparing, and then maintaining, an up-to-date list of all current operating telephone exchanges (three-digit prefixes) in Nevada's area codes. These telephone exchanges, when combined with all four-digit numbers from 0000 to 9999, constitute the set of all possible working Nevada telephone numbers, both residential and non-residential.

This set of all possible telephone numbers is then arranged in ascending order by exchange and suffix, and divided into blocks of 100 numbers each. Cross-reference directories are utilized to determine which of these blocks contain at least one listed residential number (a.k.a. one-plus blocks). The one-plus blocks are then matched to a database of listed phone numbers to identify whether the phone number is listed or unlisted. A random sample of telephone numbers is drawn from the one-plus blocks, sampling listed numbers relative to unlisted numbers at a 1.5:1 ratio. This procedure assures that all new and unlisted numbers are sampled in their correct proportions.

**TELEPHONE SURVEY (CONTINUED)**

The JTNN Needs Assessment main study included a stratified sample design. This design specified ten geographic strata that encompassed the entire state (these ten geographic areas represent the coverage areas of the state's substance abuse prevention coalitions), plus one strata that comprised a Hispanic surname oversample. Each geographic area was made up of one or more Nevada counties.

Macro purchased a random sample of telephone numbers from Genesys, a national vendor that provides lists of precisely generated telephone numbers, as required by the JTNN contract. These records were pre-screened for non-working and business numbers and configured in batches of 50. An initial sample load of 16,830 records was released on April 23; 16,800 additional records were released on May 9, and 15,150 more on May 16.

Data collection began April 19th, 2007 and ended on July 26th, 2007. The sample design called for a minimum total of 4,220 completed interviews. The target for each strata (each coalition geographic area) was 384 completes. In all, 4,648 interviews were collected. Completes by strata are detailed in the appendix. A computer-assisted telephone interviewing (CATI) approach was implemented for data collection. The telephone survey was fielded from Macro's Plattsburgh, New York CATI Research Center, as well as their sister company, Opinion Research Corporation's, Tucson, Arizona, and Reno, Nevada CATI Research Centers. The telephone survey followed a 15-attempt protocol, in which 15 attempts were made until a final disposition was obtained.

Experienced, supervised personnel conducted the JTNN Needs Assessment interviews using Computers for Marketing Corporation's (CfMC) CATI software package. To maximize response rates, Macro concentrated calls in the respondent's time zone between 5 p.m. and 9 p.m. Monday through Friday; and between 9 a.m. and 7 p.m. on Saturday and Sunday. A portion of calls was conducted between 9 a.m. and 5 p.m. Monday through Friday, in order to complete interviews with respondents who were only at home during the day. The average interview length was 18.8 minutes. Screening to randomly select a respondent in the household took approximately 1.5 minutes.

CONVENIENCE SURVEY

Brief convenience surveys can be useful tools in collecting local data that give very specific information for targeted assessment and planning purposes. To that end, adult, youth, and a Native American convenience survey instruments were developed. These were implemented from March through June 2007 by every community coalition. A total of 8,924 surveys were collected, on paper, from every community in Nevada. These surveys were completed through a broad range of strategies, including one-on-one interview sessions, door-to-door collection strategies, in front of key business locations in communities where a broad range of the population could reasonably be expected to frequent, e-mail strategies, community and focus group collection strategies, and other creative, grass roots approaches. The very large return rate is a reflection of the success of community coalitions in devising these collection strategies.

The goal of these convenience surveys was to collect information about local norms and perceptions of use, ease of access, severity of community behaviors, severity of underage binge drinking and related problems, and similar

issues. This data can help local communities determine where and how to focus their efforts when they complete community action plans in the future.

The survey was distributed and collected by each community coalition. Completed surveys were submitted to Coop Consulting for data entry and analysis. JTNN managed the submission and tracking process for this project element.

ABOUT THIS PUBLICATION

This publication consists of three major components: the results of a statewide telephone survey implemented by a national telephone research company, the results of convenience surveys implemented by all of the state's substance abuse prevention coalitions, and archival data provided by the Substance Abuse Prevention and Treatment Agency (SAPTA). A fourth component, treatment admission data, is included in the state level report.

NEVADA STATEWIDE TELEPHONE SURVEY: DATA FROM CHURCHILL COUNTY, SERVED BY THE CHURCHILL COMMUNITY COALITION

The design of the Nevada statewide telephone survey consisted of a random sample of adults aged 18 and above from each of ten geographic regions of the state, plus a sample of Hispanic adults from Clark County. These ten regions are the coverage area of the state's substance abuse prevention coalitions, and together constitute all of Nevada. These regions range in size from one county to three counties. The multi-county coalition areas of the state reflect contiguous groupings of counties with small populations. The breakdown of these regions is reflected in the table below. An additional sample was purchased of Hispanic surname households in Clark County in order to provide data for use by the Hispanic community coalition in that county.

Nevada Coalition	County/-ies in coverage area
BEST Community Coalition	Clark County (shared sample with Goshen)
Churchill Community Coalition	Churchill County
Community Council on Youth	Carson City
Eastern Nevada Community Coalition	Eureka, Lincoln, and White Pine Counties
Frontier Community Coalition	Humboldt, Lander, and Pershing Counties
Goshen Community Development Coalition	Clark County (shared sample with BEST)
Healthy Communities Coalition	Lyon, Storey, and Mineral Counties
Join Together Northern Nevada	Washoe County
Luz Community Development Coalition	Clark County – Hispanic community (standalone sample)
Nye Community Coalition	Esmeralda and Nye Counties
Partners Allied for Community Excellence	Elko County
Partnership of Community Resources	Douglas County
Statewide Native American Coalition	Twenty-seven tribal communities across state and urban area Native Americans (all Native telephone survey participants are included in counties above; not a separate sample)

The survey protocol was designed with a targeted number of 384 participants from all of the areas described above. In many areas of the state, the final sample of completed telephone interviews exceeded this target number. Individual county random samples of adults from every county were not possible due to the very small populations of some of the state's counties. For this reason the breakdown of coalition coverage areas was used to gather a sufficient total sample for this survey. A total of 4,648 completed telephone interviews was obtained. This report concentrates on respondents contacted in Churchill County, which is served by the Churchill Community Coalition.

The table below provides a breakdown of respondents (completed interviews) by county of residence.

COUNTY	NUMBER	PERCENT
CARSON	1	.2
CHURCHILL	538	98.7
LYON	2	.4
OTHER (SPECIFY)	1	.2

21+	5	.9
Total	149	27.3
Missing	396	72.7
Total with Missing	545	100.0

COMMUNITY INVOLVEMENT

Respondents were asked how many hours per week and per month they spent volunteering in their community. One way to look at the strength of various communities is to see how much time people spend volunteering. Community involvement, hours spent outside work and home in a volunteer capacity are factors in understanding community strengths. In the tables below, 148 respondents, or just over 27%, report volunteering each week in their community, and 184, or 33%, report participating in community service activities.

COMMUNITY INVOLVEMENT CONTINUED

Hours per week spent volunteering

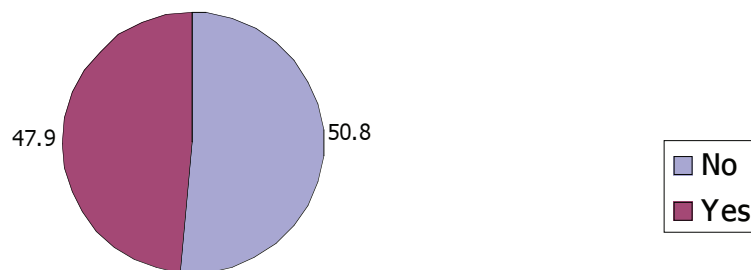

Number of hours per week	Number	Percent
0	387	71.0
1-2	62	11.4
3-4	25	4.6
5+	61	11.2
Total	535	98.2
Missing	10	1.8
Total with Missing	545	100.0

Hours spent in community service per month

Number of hours per month	Number	Percent
0	361	66.2
1-3	55	10.1
4-6	43	7.9
7-10	37	6.8
11-15	18	3.3
16+	31	5.7
Total	545	100.0

Positive adult presence, outside the family, can be very important for youth, often leading to less risky behaviors and creating adolescent resiliency. Respondents were asked if they had a mentoring or nurturing relationship with youth other than their own children in the community.

Have mentoring relationship with Community Youth

Research suggests that family time spent in non-television related activities-- such as games, reading, sports, discussions, exercise, craft projects, school activities, hobbies, etc.—is beneficial to child mental and physical health outcomes. These types of activities are also important in building positive family relationships that support healthy youth development. Questions were asked to reflect what types of activities parents were involved in with their children and facility/frequency of discussion on drugs, including alcohol. The data below, which are frequently about family behaviors, should be understood within the context of the 175 adults, reported above, who are the parent or guardian of one or more children in their household.

COMMUNITY INVOLVEMENT CONTINUED

Times family had dinner together without TV on

Number of times in the past week	Number	Percent
0	30	5.5
1-2	28	5.1

PERCEPTION OF RISK

Perception of risk addresses the likelihood that a respondent believes there will be a negative consequence of a particular activity. This can provide various ways for communities to consider planning for community level change. The sections below show respondents' perception of risk related to alcohol use, access, and drinking and driving.

Perceived Risk of Underage Drinking and Underage Drinking and Driving

Research suggests that the degree of perceived risk of specific, immediate consequences of (in this case underage drinking and drinking and driving) can determine the likelihood of that behavior.

The items related on the graph below look at:

- how likely the respondents thought it was that someone underage who was drinking would be caught by the police;
- how likely someone under 21 who was drinking and driving would be to lose their license;
- how likely it was that nothing would happen to someone under 21 who was caught drinking and driving (this item was reverse-coded to match response direction of the two questions above).

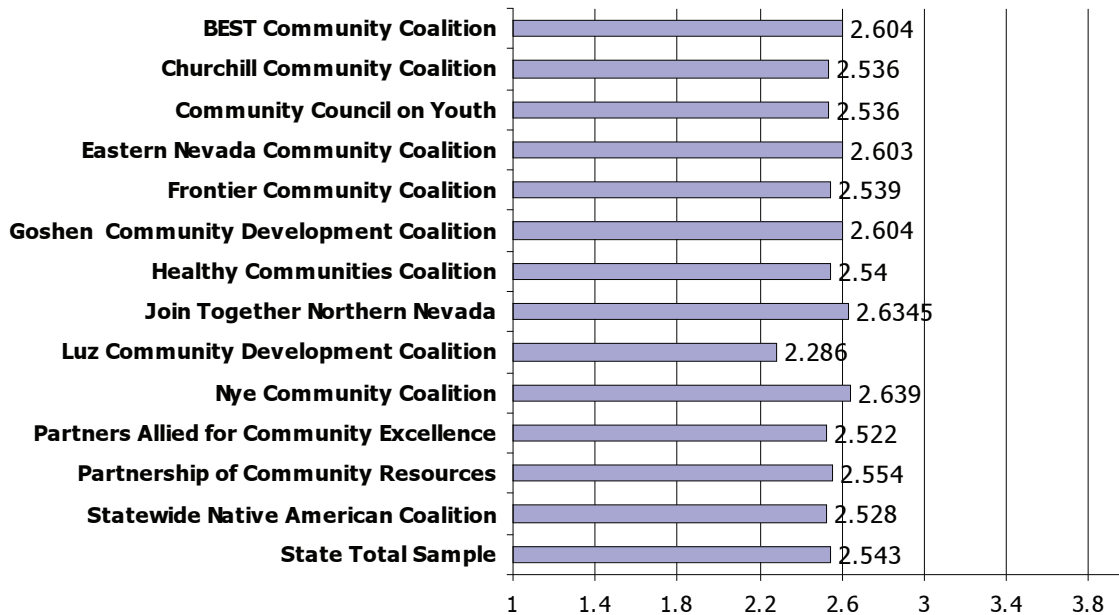

Items in the survey were combined to create a scale that measures perceived risk with regard to underage drinking and underage drinking and driving. Each of the items was scored on a scale that ranged from 1 = very likely to 4 = very unlikely (the ratings were added and divided by 4 to create a scale score between 1 and 4).

PERCEPTION OF RISK CONTINUED

The following graphs provide the average ratings for each of the coalition areas in the state. The Luz Coalition is representative of Clark County Hispanics and the Statewide Native American Coalition includes Nevada Native Americans from all the Tribes in the state.

Perceived Risk of Underage Drinking/ Underage Drinking and Driving

The average score of 2.54 indicates that respondents think there is little perception of risk that underage youth will suffer any consequences for drinking alcohol or for drinking and driving. A scale score of 2.5 is a neutral score, the midpoint between very likely and very unlikely.

Perceived Risk of Drinking and Driving Behaviors

Motor vehicle-related injuries are a leading cause of death in Nevada; this includes minors affected by alcohol-related accidents. The information below deals with perceptions of risk involved in drinking and driving, and the likelihood of being impacted if driving under the influence (DUI).

Perception of drinking and driving risks are measured in the section below through the following survey items:

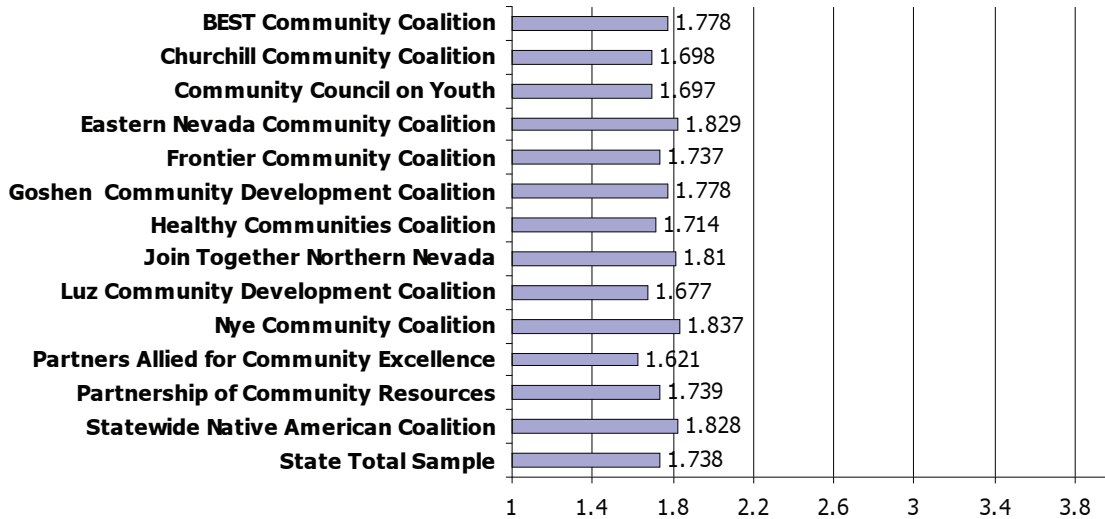

- likelihood of being stopped by the police when driving with more than the legal blood alcohol limit;
- likelihood of being convicted if you were stopped and charged with DUI;
- likelihood of being arrested if stopped by the police for DUI.

PERCEPTION OF RISK CONTINUED

Ratings were summed as for the previous scale and average score for the sample identified in the following graph and compared to other coalition areas in the state.

Perceived Risk of Drinking and Driving Behaviors

The average state score of 1.738 indicates that respondents think it is somewhat likely that people will suffer consequences of drinking and driving.

Perceived Risk of Providing Alcohol to Minors and Intoxicated Patrons

An important aspect of alcohol use is how minors and intoxicated persons obtain alcohol, where it is purchased, and consequences of selling to underage persons. The graph reflects the perceived risk of selling alcohol to a minor or an intoxicated person.

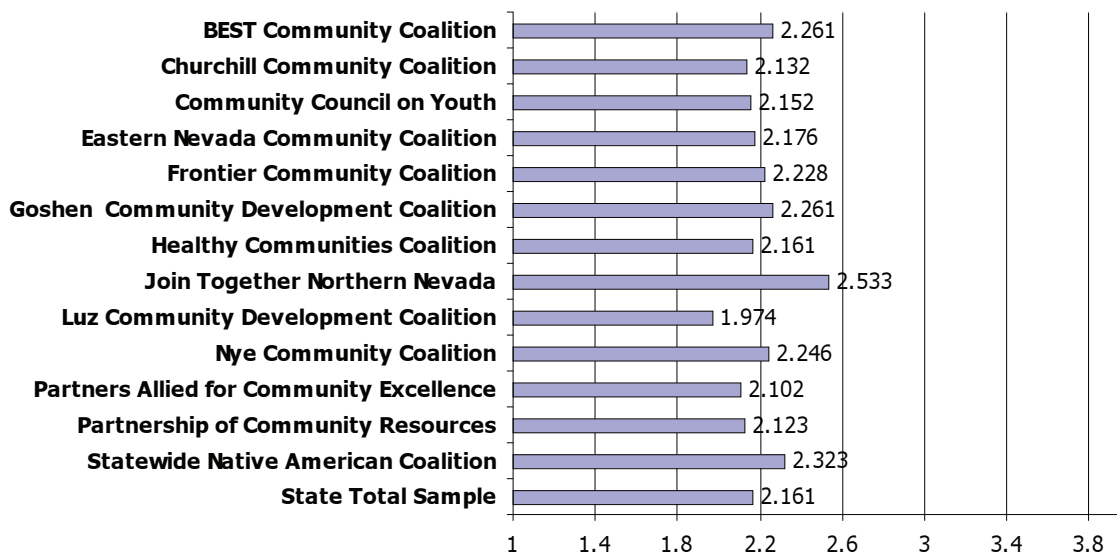

A risk scale for illegally providing alcohol was constructed from two survey items:

- the likelihood of being arrested for selling alcohol to an intoxicated person;
- the likelihood of being given a citation and fined for giving or selling alcohol to someone under 21 years of age.

PERCEPTION OF RISK CONTINUED

Perceived Risk of Providing/Selling Alcohol to Minors or Intoxicated Persons

The average state score of 2.16 indicates that respondents think it is only somewhat likely that people will suffer consequences of selling alcohol to minors and intoxicated persons (1 = very likely, 4 = very unlikely).

Respondents also were asked about the consequences of selling to someone less than 21 years of age.

Consequences for selling alcohol to minors

Possibility	Number	Percent
They would be fined	244	44.8
Lose their license to sell	161	29.5
They would go to jail	71	13.0
Nothing would happen	42	7.7
Total	518	95.0
Missing	27	5.0
Total with Missing	545	100.0

How frequent and present are police sobriety checkpoints? The awareness of enforcement activity is one of the key predictors of perception of risk. Information below reflects how many times respondents had been through a sobriety checkpoint in the past year, which can serve as one measure of awareness of the level of enforcement activity.

PERCEPTION OF RISK CONTINUED

Number of times through a sobriety checkpoint in the past year?

Times in the past year	Number	Percent
0	513	94.1
1	19	3.5
2	4	.7
3	3	.6
4	3	.6
8	1	.2
10	1	.2
Total	544	99.8
Missing	1	.2
Total with Missing	545	100.0

Responses ranged from 0 to 10 with the majority of responses 0. The average number of times for the entire sample was .12 (almost 0) indicating that sobriety checkpoints are very infrequent.

Perception of Harm to Self

Another question focused on the risk of harming themselves physically and in other ways when they have 5 or more drinks of alcohol once or twice a week. Binge and heavy drinking is associated with multiple poor health outcomes, including addiction, disability due to injury, early death, and physical and mental health problems. The average rating for harm to self was 3.36 indicating that respondents thought 5 or more drinks at one sitting once or twice a week is a great risk.

Risk	Number	Percent
1-No Risk	16	2.9
2-Slight Risk	62	11.4
3-Moderate Risk	169	31.0
4-Greate Risk	285	52.3
Total	532	97.6
Missing	13	2.4
Total with Missing	545	100.0

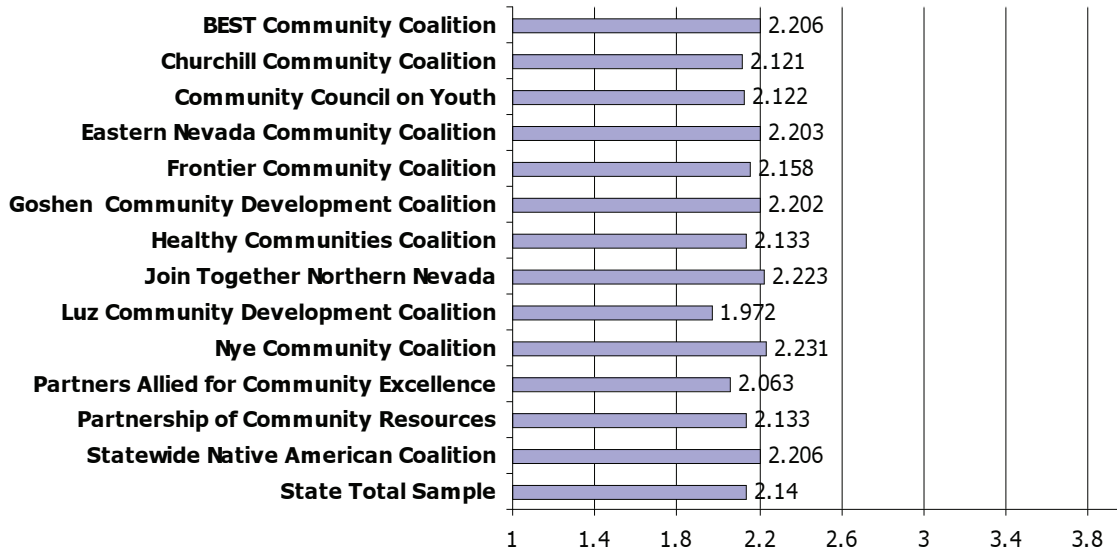

Overall Perception of Risk

How does a community perceive risk? What is the perceived impact of alcohol use on a community? The graph below includes all risk items discussed above. It is a global measure of a community's perception of the risks associated with getting caught drinking if underage, drinking and driving, selling alcohol to minors and intoxicated patrons and harm to self from binge drinking.

PERCEPTION OF RISK CONTINUED

Overall Perception of Risk Related to Alcohol

The state average of 2.14 indicates that respondents felt it was only somewhat likely that people experience consequences from underage drinking, getting caught drinking if underage, drinking and driving, selling alcohol to minors and intoxicated patrons and harm to self from binge drinking (the midpoint risk measure on this scale is 2.5; risk is very likely = 1, risk is very unlikely = 4).

NORMS

Norms provide the context for behavior choices. Respondents were asked whether they agreed or disagreed that parents should not let their children or their children's friends who are under 18 years of age drink alcohol at home. Respondents used a five point rating from strongly agree to strongly disagree.

Rating	Number	Percent
Strongly agree	329	60.4
Agree	92	16.9
Neither agree nor disagree	40	7.3
Disagree	46	8.4
Strongly disagree	34	6.2
Total	541	99.3
Missing	4	.7
Total with Missing	545	100.0

PRICING

Do pricing strategies increase retail sales? The table below shows whether respondents agree that they are more likely to buy alcohol from a store that advertises discount pricing on alcohol.

I don't drink alcohol	127	23.3
Strongly agree	68	12.5
Agree	89	16.3
Neither agree nor disagree	103	18.9
Disagree	70	12.8
Strongly disagree	78	14.3
Total	535	98.2
Missing	10	1.8
Total with Missing	545	100.0

PROMOTION

How prominent is advertising for alcohol at public events? The information below reflects how often respondents see alcohol advertising at sporting and other events they might attend.

Rating	Number	Percent
I don't attend these events.	44	8.1
A lot	225	41.3
Sometimes	196	36.0
Never	68	12.5
Total	533	97.8
Missing	12	2.2
Total with Missing	545	100.0

ENFORCEMENT OF ALCOHOL LAWS

What is the perception of enforcement of alcohol laws in Nevada? Should sobriety checkpoints be a regular part of police activity? Respondents were asked if they agree that police should conduct regular sobriety checkpoints to detect drinking and driving. The table below details their responses.

Rating	Number	Percent
Strongly agree	319	58.5
Agree	154	28.3
Neither agree nor disagree	32	5.9
Disagree	26	4.8
Strongly disagree	9	1.7
Total	540	99.1
Missing	5	.9
Total with Missing	545	100.0

Are enforcement practices sufficient? The table below details respondent perception as to whether Nevada's enforcement of drinking and driving laws was appropriate, ranking from "too strict" to "not strict enough".

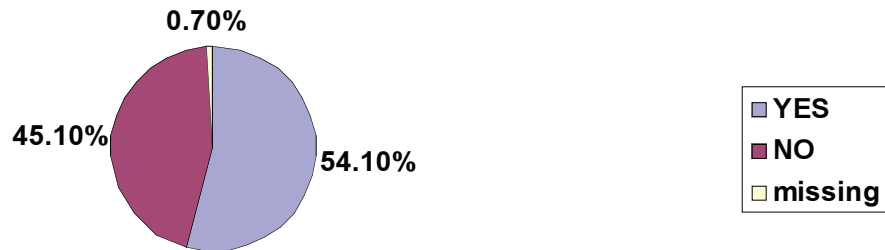

Rating	Number	Percent
Too strict	14	2.6
Not strict enough	154	28.3
Just about right	201	36.9
Total	369	67.7
Missing	176	32.3
Total with Missing	545	100.0

How prominent are police efforts in the community in dealing with drinking and driving?

The graphs below show whether respondents have heard or seen anything about police setting up sobriety checkpoints or other enforcement efforts to catch drivers who were driving while under the influence of alcohol, and whether the respondent has been arrested for DUI in the past year.

**ENFORCEMENT OF ALCOHOL LAWS** CONTINUED

Heard anything about alcohol law enforcement activities?

Have you been arrested for DWI in the past year?

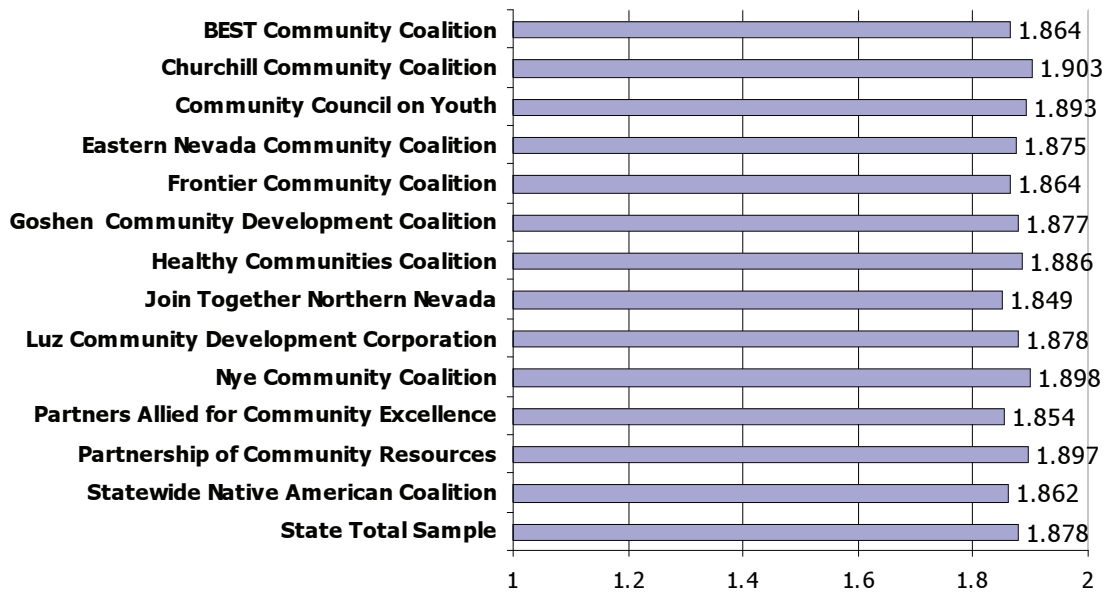

**RETAIL ACCESS BY INTOXICATED PATRONS**

Two items measured retail access issues related to sales to patrons already intoxicated. One question asked if the respondent had seen other people served alcohol when they were already intoxicated during the past 30 days and the other question asked if during the past 30 days the respondent had been served alcohol when they had already had too much to drink. These items were combined into a scale with 1 = yes and 2 = no. Lower scores (closer to 1) indicate that the respondents did not see or experience alcohol control measures through beverage servers or sales people, but instead observed alcohol being made readily available to intoxicated persons.

RETAIL ACCESS BY INTOXICATED PATRONS CONTINUED

Retail Access by Intoxicated Adults

ACCESS TO ALCOHOL FOR MINORS

Three items asked about access to alcohol issues for minors. The first question asked respondents (N=15 minors in the sample) how easy it is for them to get alcohol.

Difficulty	Number	Percent without Missing
Very difficult	1	6.7
Somewhat difficult	1	6.7
Somewhat easy	5	33.3
Very easy	8	53.3
Total	15	100.0
Missing	530	
Total with Missing	545	

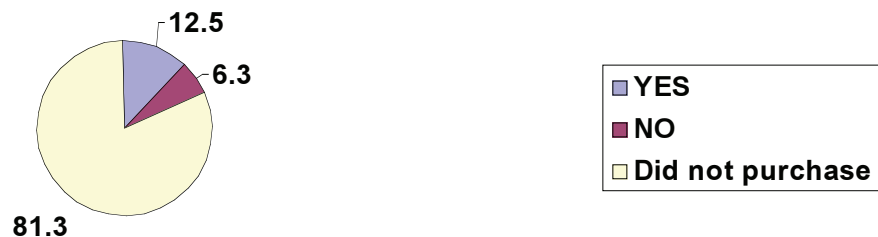

ACCESS TO ALCOHOL FOR MINORS CONTINUED

This was followed by a question that asked the minors who responded how they got their alcohol.

Where	Number	Percent without Missing
I did not drink alcohol during the past 30 days	8	66.7
I got it from a friend or acquaintance of my parents	1	8.3
I got from a friend who is under 21	1	8.3
I bought it myself using a fake ID at a store	1	8.3
Other	1	8.3
Total	12	100.0
Missing	533	
Total with Missing	545	

Was your ID checked during alcohol purchases in the past 30 days?

SUPPORT FOR ALCOHOL POLICY

Five questions at the end of the interview measured respondents' attitudes (strongly favor to strongly oppose) regarding specific legislative and policy controls for alcohol. These questions included:

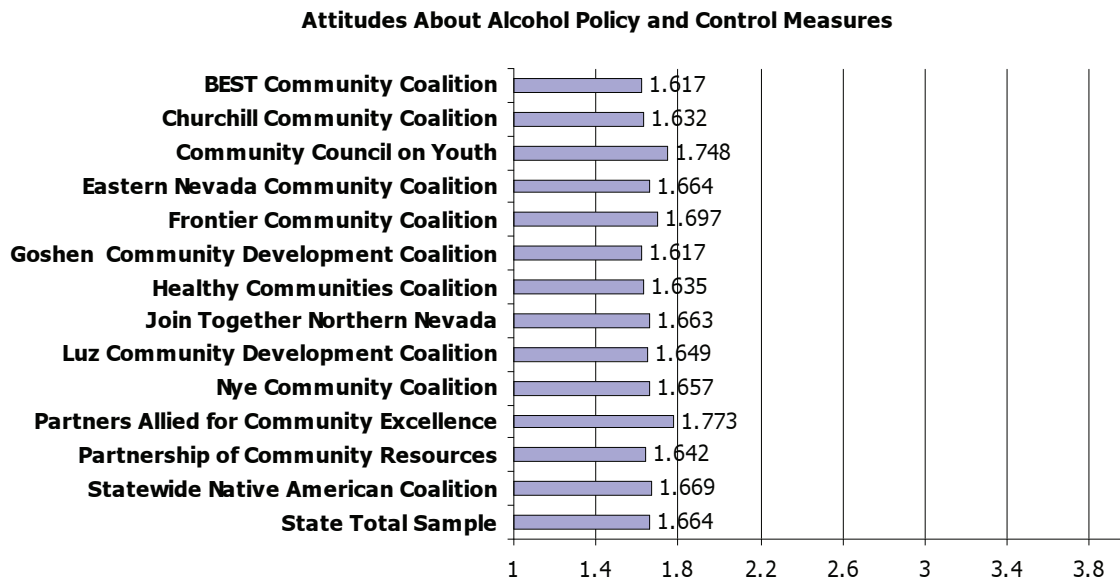

- Should advertisements for alcoholic beverages within our communities be restricted to making drinking less appealing to kids?
- Alcohol companies often sponsor special events so that they can advertise and sell alcohol there. How strongly would you favor or oppose a recommendation to community planners that they refuse sponsorship by alcohol companies for events attended by teens?

SUPPORT FOR ALCOHOL POLICY CONTINUED

- Increasing efforts to reduce underage drinking will cost money. In order to raise the money, how strongly do you favor or oppose an increase of 5 cents per drink in the tax on beer, wine, and liquor sold to pay for programs for prevention of underage drinking and to increase alcohol prevention and treatment programs?
- Would you favor or oppose laws in Nevada that make it easier for adults to be held liable if they alcohol to a teenager and then someone gets hurt?
- Would you favor or oppose laws or ordinances in your community that penalize adults for hosting underage drinking parties?

These items were combined into an attitude about alcohol policy scale based on respondent ratings with 1 = strongly favor and 4 = strongly oppose.

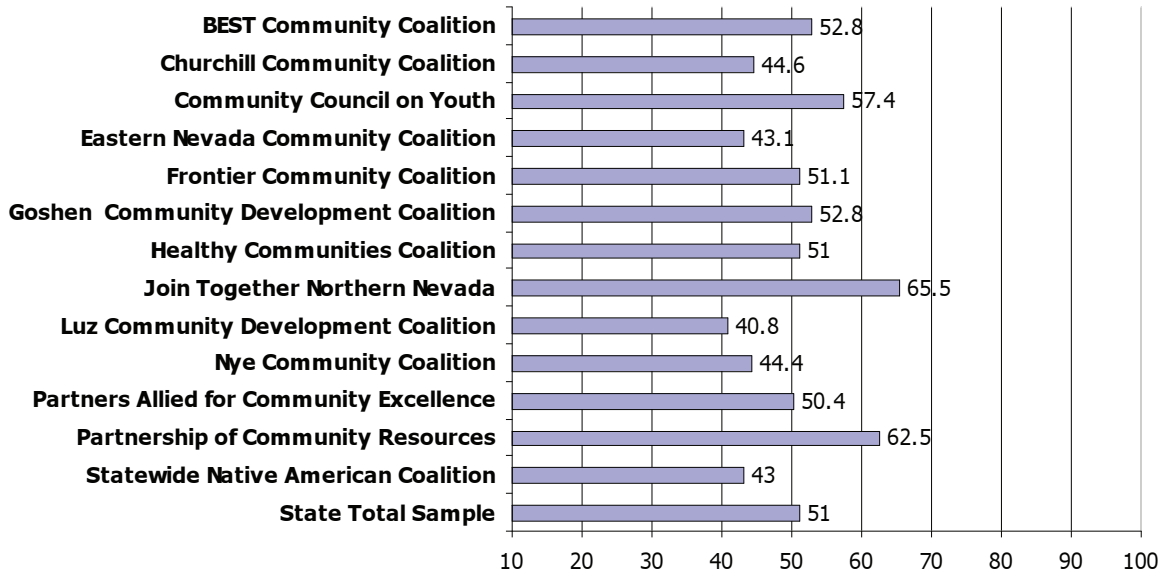

ALCOHOL USE

The average age of first use for alcohol in the statewide telephone sample was 15.8 years. Respondents reported started drinking as early as infancy and as late as 55 years. The question asked respondents to report on age of first use for drinking more “than a sip or two” of alcohol.

Respondents were asked if they had at least one alcoholic drink in the past 30 days. This will provide an indication of norms around drinking and acceptance of alcohol, in general, for particular communities. As is evident in the resulting graph below, that displays the results from all coalition areas, there is a large variance among the regions and populations of the state.

**ALCOHOL USE** CONTINUED

Have you had at least one alcoholic drink in the past 30 days?

Respondents also were asked to report on how many days per week or per month during the past 30 days they had at least one drink of any alcoholic beverage.

Number of days per week	Number	Percent
1	41	40.2
2	17	16.7
3	8	7.8
4	10	9.8
5	7	6.9
7	19	16.6
Total	102	100.0

**ALCOHOL USE** CONTINUED

Number of days per month	Number	Percent
1	28	27.7
2	19	18.8
3	13	12.9
4	9	8.9
5	3	3.0
6	1	1.0

Total with Missing	545	100.0

**ALCOHOL USE** CONTINUED

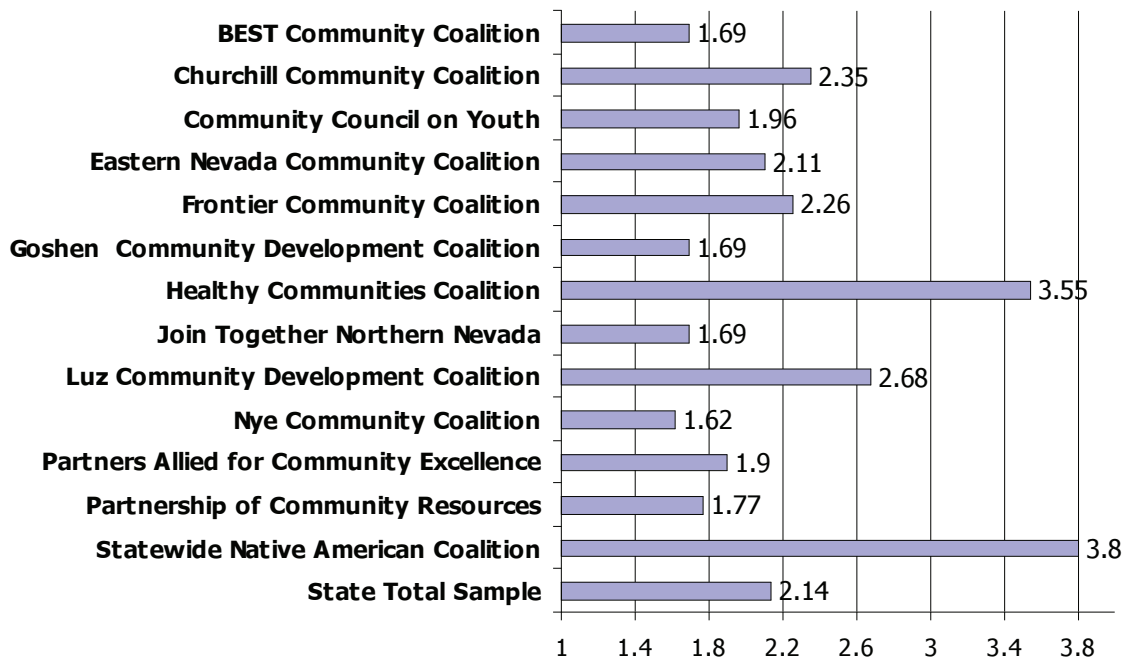

The graph for the next question compares each coalition with the statewide percentage of respondents who said that they had had 5 or more drinks in a row at least once during the past 30 days. This is the traditional measure of binge drinking in a community. The average number of times for the statewide sample was .75 (less than 1) indicating that most respondents (N=2576) denied any drinking occasions during the past 30 days where they drank 5 or more drinks in a row.

ALCOHOL USE CONTINUED

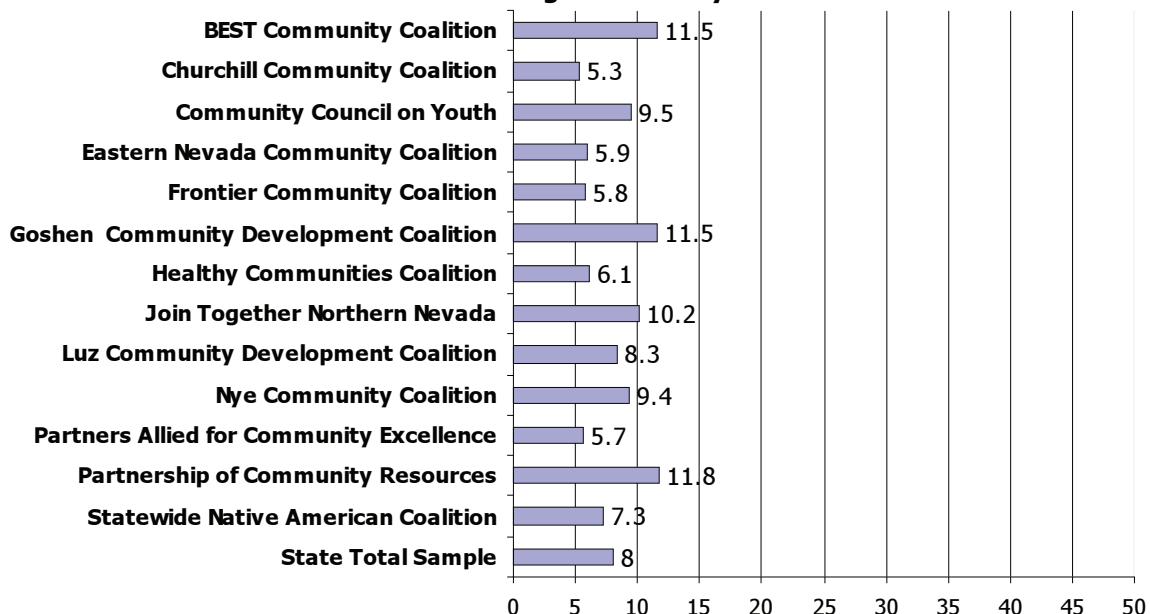

The next graph provides a comparison among the state sample and the coalitions of the average number of drinks consumed the last time the respondent drank and drove.

Average number of drinks you had last time you drank and drove

This next graph compares each coalition area with the statewide sample for the percentage of respondents who said yes to the question about whether they had ridden with someone else who had been drinking during the past 30 days.

Percent Respondents who rode in a car driven by someone who had been drinking--last 30 days

TOBACCO USE

The first question on tobacco use asked respondents whether anyone at home smoked cigarettes.

Tobacco use in the home

The next question asked respondents whether they had smoked 100 cigarettes in their entire lives. One pack contains 20 cigarettes.

Ever smoked 100 cigarettes

TOBACCO USE CONTINUED

The next question asked smokers if they smoked every day, some days, or not at all. The largest portion of respondents never smoked.

	Number	Percent
Every day	72	13.2
Some days	22	4.0
Not at all	168	30.8
Total	262	48.1
Missing	283	51.9
Total with Missing	545	100.0

Finally, respondents were asked how many cigarettes a day they smoked. A total of 263 respondents said they smoked and the minimum number of cigarettes anyone reported smoking on a daily basis was 0 (none) and the maximum number of cigarettes was 100 (about 5 packs). The average number of cigarettes smoked was 17.17 (less than one pack).

MARIJUANA LEGALIZATION

How strongly do you favor or oppose the legalization of marijuana?

Rating	Number	Percent
Strongly favor	76	13.9
Somewhat favor	61	11.2
Somewhat oppose	57	10.5
Strongly oppose	337	61.8

NEVADA COMMUNITY CONVENIENCE SURVEY: DATA COLLECTED BY CHURCHILL COALITION, SERVING CHURCHILL COUNTY

The Nevada statewide convenience survey consisted of a sample of individuals selected by coalition members from each of ten geographic regions of the state represented by the state's substance abuse prevention coalitions, and a sample of Native American individuals from the state's many Native American communities. The ten regions constitute the entire geographic area of Nevada. These regions range in size from one county to three counties. The multi-county coalition areas of the state reflect contiguous groupings of counties with small populations.

There are a total of thirteen coalitions serving persons in Nevada, with their coverage areas shown in the table below. Each of these coalitions collected surveys for this data project. Each coalition identified populations or neighborhoods and collection strategies that would provide the best community input from individuals for their planning purposes. The Statewide Native American Coalition utilized a slightly altered version of this instrument. Four coalitions also collected data from youth using a survey tailored for that age group. All of those results, as well as the aggregated statewide data, are reported separately.

Nevada Coalition	County/-ies in coverage area
BEST Community Coalition	Clark County
Churchill Community Coalition	Churchill County
Community Council on Youth	Carson City
Eastern Nevada Community Coalition	Eureka, Lincoln, and White Pine Counties
Frontier Community Coalition	Humboldt, Lander, and Pershing Counties
Goshen Community Development Coalition	Clark County
Healthy Communities Coalition	Lyon, Storey, and Mineral Counties
Join Together Northern Nevada	Washoe County
Luz Community Development Coalition	Clark County – Hispanic community
Nye Community Coalition	Esmeralda and Nye Counties
Partners Allied for Community Excellence	Elko County
Partnership of Community Resources	Douglas County
Statewide Native American Coalition	Twenty-seven tribal communities across state and urban area Native Americans

A total of 9,162 surveys was collected utilizing the three survey instruments (community –6,450, Native American – 1,253, and youth – 1,459), exceeding the total target twofold. This report describes the community instruments collected by the Churchill Community Coalition, serving Churchill County.

Respondents who marked the other category also could write down their racial background.

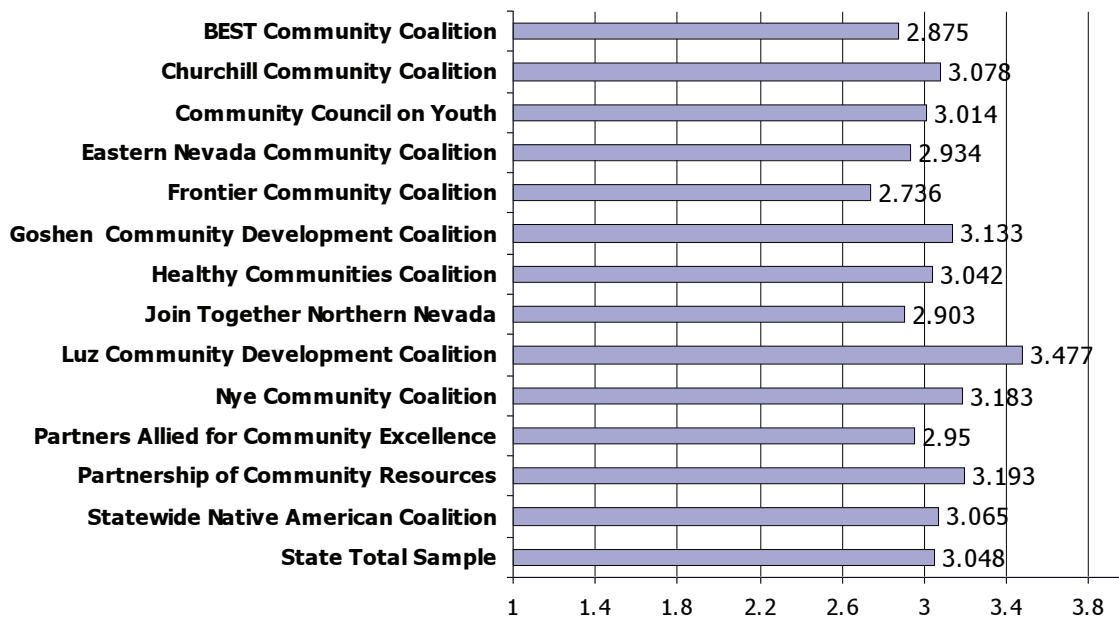

NORMS

Respondents were asked how wrong most people in their community think it is to binge drink and how wrong most community people think it is for underage youth (15-20 years) to drink. Both these questions were rated using a scale from “very wrong” = 4 to “not wrong at all” = 1. Higher scores on the scale comprised of these items (average scores were calculated) indicated the group thought it was very wrong. Scores ranged from 1 to 4 after the average score was calculated.

The average score on the scale about drinking norms was 3.08 indicating that the group thinks that it is wrong to binge drink and for underage youth to drink, but it is not considered very wrong.

Social / Community Norms

Total	248	97.6
Missing	6	2.4
Total with Missing	254	100.0

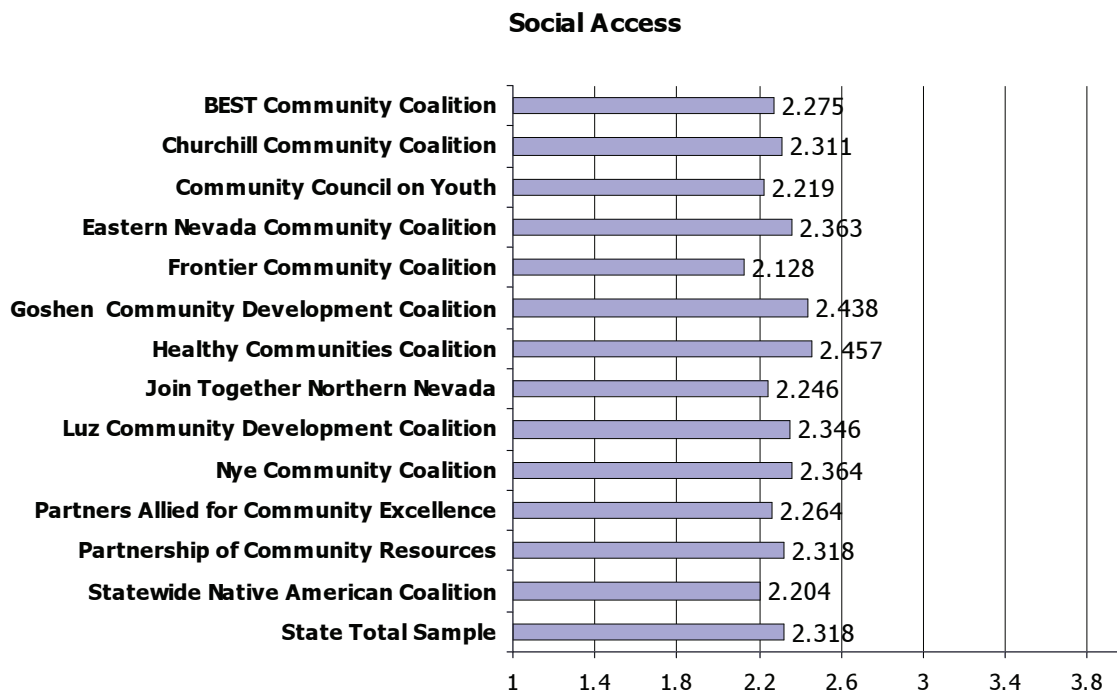

The next question also was rated using a four-point scale but the scale was rated from “strongly disagree” = 1 to “strongly agree” = 4. The average score on this question for the group was 2.21.

Underage drinking is a rite of passage and not likely to change

Rating	Number	Percent
Strongly Disagree	56	22.0
Disagree	83	32.7
Agree	74	29.1
Strongly Agree	15	5.9
Total	228	89.8
Missing	26	10.2
Total with Missing	254	100.0

SOCIAL ACCESS

Social access included items that asked respondents about how youth acquire alcohol and focused on access from family, parents, strangers, and friends. The first scale is a composite of responses to the question about how easy or difficult it is for youth to alcohol from older siblings, parents, friends, and adults / strangers. Each source was rated separately using the scale 1= “very easy” to 4 = “very difficult”. The responses for these ratings were added together and divided by 4 to develop a social access scale with scores that ranged from 1 to 4.

**SOCIAL ACCESS** CONTINUED

Mean Scale: Social Access

Rating	Number	Percent
1.00 very easy	24	9.4
1.25	14	5.5
1.50	16	6.3
1.75	20	7.9
2.00 easy	50	19.7
2.25	29	11.4
2.33	1	.4
2.50	25	9.8
2.75	11	4.3
3.00 difficult	25	9.8
3.25	7	2.8
3.33	1	.4
3.50	6	2.4
3.75	5	2.0
4.00 very difficult	10	3.9
Total	244	96.1
Missing	10	3.9
Total with Missing	254	100.0

**SOCIAL ACCESS** CONTINUED

How easy or difficult do you think it would be for underage youth to get beer, wine coolers, or liquor from home without their parents knowing it?

Rating	Number	Percent
Very easy	68	26.8
Easy	123	48.4
Difficult	37	14.6
Very difficult	19	7.5
Total	247	97.2
Missing	7	2.8
Total with Missing	254	100.0

How often do you think parents in your community provide alcohol at parties their children host?

Rating	Number	Percent
Never	26	10.2
Sometimes, but not that often	122	48.0
Often	83	32.7
Very often	9	3.5
Total	240	94.5
Missing	14	5.5
Total with Missing	254	100.0

When you think about underage youth, where do you think they usually obtain alcohol?

Item	Number	Percent
Friends	184	72.4
Parents	55	21.7
Strangers	72	28.3
Other Family members	60	23.6

This table should be understood in the context of the entire sample of individuals who completed the survey. This table, and the one that follows under Retail Access, are built from one question that asked about multiple sources of alcohol, some social, some retail. Respondents could choose more than one response, so the responses total to more than 100%. The key observation here is that most respondents believe social sources, especially friends, are the primary source of alcohol for underage youth.

RETAIL ACCESS

When you think about underage youth, where do you think they usually obtain alcohol?

Item	Number	Percent
A liquor store	55	21.7
A bar	10	3.9
A restaurant	7	2.8
A grocery store	29	11.4
A convenience store	65	25.6

Along with the preceding table, this table is constructed from the question that allowed multiple responses about access to alcohol by underage youth, and the responses from the two tables exceed 100%. Based on this question, a few types of retail establishments are considered retail sources of alcohol for youth. However, in the context of the previous table, it is clear that social sources are viewed as the primary source of alcohol for underage youth.

How well does your community monitor the location of alcohol outlets and bars?

Rating	Number	Percent
Not at all well	29	11.4
Not well	66	26.0
Sort of well	93	36.6
Very well	36	14.2
Total	224	88.2
Missing	30	11.8
Total with Missing	254	100.0

Those serving alcohol in my community are properly trained to do so

Rating	Number	Percent
Strongly Disagree	37	14.6
Disagree	96	37.8
Agree	75	29.5
Strongly Agree	14	5.5
Total	222	87.4
Missing	32	12.6
Total with Missing	254	100.0

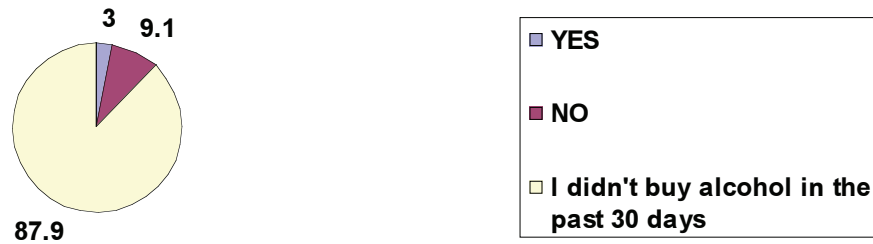

RETAIL ACCESS CONTINUED

The next tables were answered by the portion of the sample that was under 21 years of age (minors).

During the past 30 days, if you bought alcohol at a store such as a grocery store, liquor store, convenience store, or gas station, did the person check your ID?

ID check at retail sales source

During the past 30 days, did anyone ever refuse to sell you alcohol because of your age?

Option	Number	Percent without Missing
I did not try to buy alcohol in the past 30 days	58	22.8
Yes, someone refused to sell me alcohol because of my age	2	.8
No, my age did not keep me from buying alcohol	6	2.4
Total	66	26.0
Missing	188	74.0
Total with Missing	254	100.0

RETAIL ACCESS CONTINUED

How many stores do you know of that would sell you alcohol without asking you for ID or proof of age?

Number of stores	Number	Percent without Missing
0	22	40.0
1	4	7.3
2	10	18.2
3	10	18.2
4	3	5.5
5	1	1.8
6	1	1.8
10	1	1.8
11	1	1.8
12	1	1.8
21	1	1.8
Total	55	100.0
Missing	199	
Total with Missing	254	

PERCEPTION OF RISK

If you were to drink and drive, what do you think would happen to you?

Item	Number	Percent
The police would catch me.	133	52.4
I would get a ticket and pay a fine.	71	28.0
I would go to jail for a night.	84	33.1
Nothing would happen to me.	25	9.8
Anything else?	22	8.7

For anything else, respondents suggested:

- Have to go to AA meetings
- Accident
- Community service
- Die
- DWI
- Embarrassed
- Get my parents in trouble
- Grounded
- Higher insurance
- Hurt somebody else
- Impound car
- Jail
- Lose job

PERCEPTION OF RISK CONTINUED

- Lose license
- Mom would kill me
- Probation
- Public humiliation
- Suspend license.

Respondents were also asked if they agreed that law enforcement does very little to stop underage drinking. This item was scored using the “strongly disagree” = 1 to “strongly agree” = 4 rating.

Law enforcement does very little to stop underage drinking.

Rating	Number	Percent
Strongly Disagree	46	18.1
Disagree	113	44.5
Agree	50	19.7
Strongly Agree	17	6.7
Total	226	89.0
Missing	28	11.0
Total with Missing	254	100.0

PROMOTION

Two items studied promotion. Respondents rated these using four point scales with 1 = “not at all well” or “strongly disagree” and 4 = “very well” or “strongly agree”.

How well does your community monitor the location of alcohol advertising?

Rating	Number	Percent
Not at all well	25	9.8
Not well	79	31.1
Sort of well	86	33.9
Very well	34	13.4
Total	224	88.2
Missing	30	11.8
Total with Missing	254	100.0

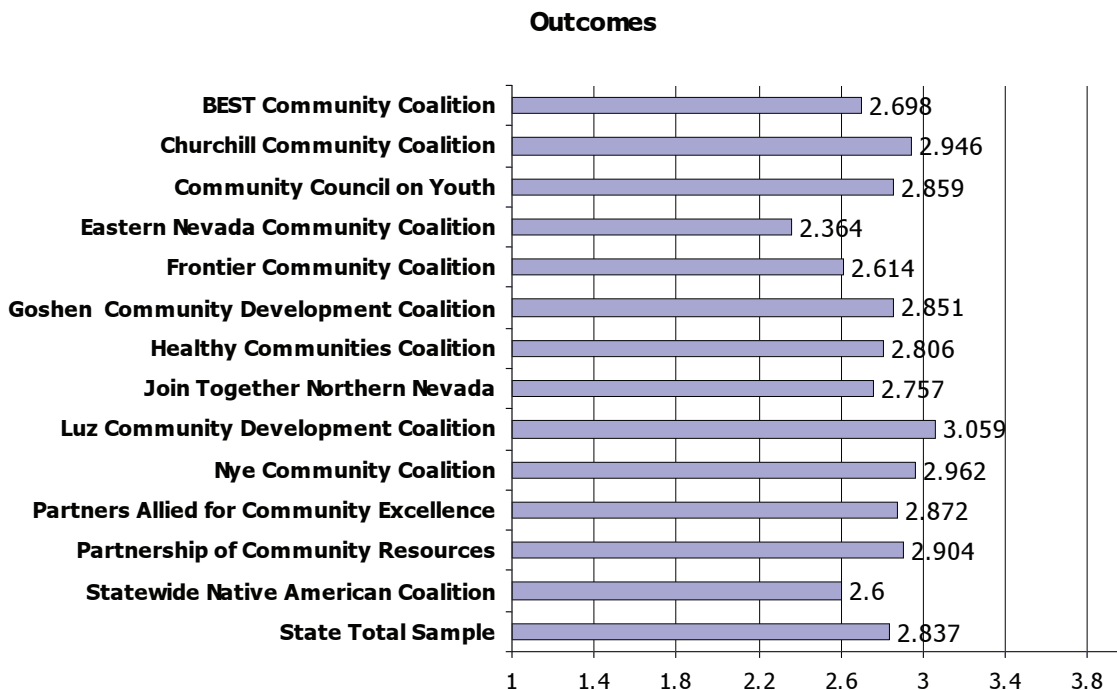

PROMOTION CONTINUED

Alcohol advertising should not be allowed at events attended by children such as sporting events or community celebrations.

Rating	Number	Percent
Strongly Disagree	27	10.6
Disagree	59	23.2
Agree	61	24.0
Strongly Agree	81	31.9
Total	228	89.8
Missing	26	10.2
Total with Missing	254	100.0

OUTCOMES

A scale was developed using three questions with the answer ratings that ranged from 1= "not a problem" to 4 = "a serious problem". The three questions asked how serious a problem underage drinking is at unsupervised, informal gatherings in the community; how serious a problem alcohol related motor vehicle crashes are in the community; and how serious a problem drinking and driving is in the community. The average score for the scale was 2.94 indicating the respondents think these problems are slightly more than "somewhat of a problem".

OUTCOMES CONTINUED

Serious Problem scale responses

Rating	Number	Percent
1.00 Not a problem at all	4	1.6
1.33	4	1.6
1.50	2	.8
1.67	6	2.4
2.00 Somewhat of a problem	32	12.6
2.33	34	13.4
2.67	32	12.6
3.00 Serious problem	40	15.7
3.33	40	15.7
3.50	1	.4
3.67	25	9.8
4.00 Very serious problem	26	10.2
Total	246	96.9
Missing	8	3.1
Total with Missing	254	100.0

The next outcomes question asked respondents to identify the percentage of youth under 21 years of age who drank alcohol during the past 30 days. Percentages ranged from 0 to 100 with approximately 10.6% of the sample saying 50% and 8.7% of the sample identifying 75%. The average percentage identified by the group overall was 55.89%. Less than 2% of the sample said that 0% (none) of underage youth in the area drank alcohol during the past 30 days.

If you drink alcohol, during the past 30 days, on how many days did you have 5 or more drinks of alcohol in a row?

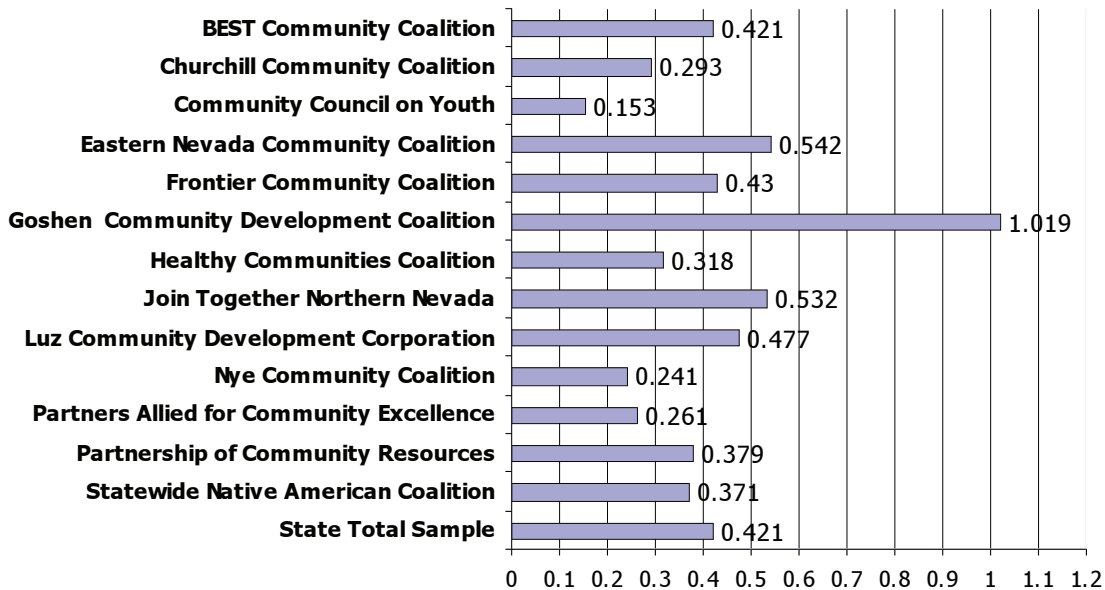

Number of days	Number	Percent	Percent without Missing
0 days	163	64.2	76.9
1 day	11	4.3	5.2
2 days	14	5.5	6.6
3-5 days	7	2.8	3.3
6-9 days	5	2.0	2.4
10-19 days	6	2.4	2.8
20 or more days	6	2.4	2.8
Total	212	83.5	100.0
Missing	42	16.5	
Total with Missing	254	100.0	

The average number of days for this question was less than 1, 0.68. However, 49 or 23% reported binge drinking during the previous thirty days.

OUTCOMES CONTINUED

How many times did you drink and drive in the past 30 days?

Across the state there is a great deal of variability in the responses for this question. For some areas, the average number of times is close to 0 (Community Council on Youth, .153) while for other regions, the average number of times is greater than once a month that respondents said they drank and drove (Goshen, 1.019).

If you drink, during the past 30 days, how many times did you drive a car or other vehicle when you had been drinking alcohol?

Number of times	Number	Percent
0 times	199	78.3
1 time	6	2.4
2 or 3 times	6	2.4
4 or 5 times	1	.4
6 or more times	3	1.2
Total	215	84.6
Missing	39	15.4
Total with Missing	254	100.0

The average number of times during the past 30 days was .15 (less than 1). Of those who responded affirmatively, 16 or 7% reported that they had driven a car at least once when they had been drinking.
